

Building on experience

Nauta Heeg Staalbouw is building on 150 years of experience – a solid foundation for the future success of our steel construction company. We supply complex steel structures, are specialists in the area of slackening structures and also build structures for offshore use.

As a company, we draw on our past experience, while keeping our sights firmly fixed on the future. The complex structures we build and the special products to which we contribute can be found in the Netherlands and abroad. Nauta Heeg excels as a supplier of slackening structures, equipment and offshore structures, as well as complex steel structures for the industrial, commercial and industrial building and civil engineering sectors.

Our premises are in a unique location on open water, which presents all kinds of possibilities. Large structures can be manufactured and shipped in a single piece. We also have experienced assembly teams who will assemble structures on site.

Nauta Heeg is part of the GB Steel Group. Within this group we are united in steel with five other companies and can handle any order individually or by working together.
